Excellence in Solutions

## MFE Quarterly Newsletter

October 2025 vol. 3

### SPEED, QUALITY, and EASE...You're Welcome!

Welcome to the latest edition of our Metal Fabrication Quarterly Newsletter!

When you're on a tight timeline, the last thing you need is a fabrication partner who slows you down. At Metal Fab Engineering, we get it.

You want parts that are cut right, welded strong, and delivered fast, without the back-and-forth hassle. That's why we've built our process around three things that matter most: **speed, quality, and ease**.

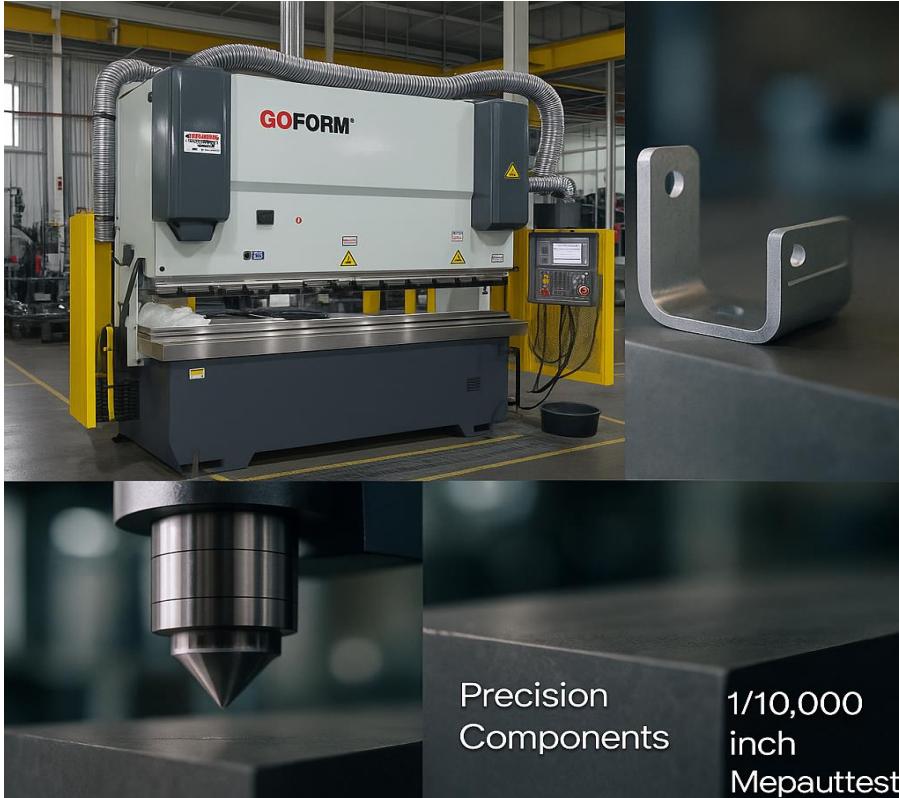

From laser cutting and bending to precision welding, our team makes it simple to go from idea to finished product. We handle the details, keep communication clear, and make sure every job meets the standard we'd expect for ourselves.

#### **HIGHLIGHTS:**

- **Speed-our new presses**
- **Quality assurance program**
- **News Highlights**

# Our New Press Brakes:

## Setting Expectations You Can Trust

**When you invest in a product, you expect it to work as intended, arrive in excellent condition, and match exactly what you were promised. At the core of our business, that's what we focus on; Speed, Quality, and Transparent Partnership.**

**It's easy to want everything "now." We all appreciate the convenience of two-day delivery, but in manufacturing, that timeline simply isn't realistic, at least not without sacrificing precision and reliability. And we're not willing to compromise on either.**

**Instead of quick promises that can't be kept, we believe in honesty. You'll always receive an accurate, realistic timeline from us, whether it's for a custom tank or any other project. We won't overpromise, and we won't underdeliver.**

# The News:

Trilink Golf Trailer **COMING SOON**

I'm thrilled to share our latest innovation with you - the trilink golf cart trailer. As an avid golfer myself, I know how frustrating traditional trailers can be. That's why we developed this patented design using durable carbon steel construction and eye-catching powder coat finishes available in several custom colors. You can choose from three different trim packages to match your style and budget. What really sets this trailer apart is its smooth ride, thanks to the coil-over suspension system. Plus, the single-wheel design means you'll never have to worry about jack-knifing when backing up. It's a game-changer for anyone who loves having the room for everyone.
